Spatter Sieve

The spatter shieve is used for soft blending and spattering techniques.

By loading a toothbrush or a stiff-bristled brush with paint and rubbing it across the wire sieve, the paint is scattered through the holes as fine particles, allowing you to create delicate soft-focus effects and precise spattering.

The sieve can also be used to shave soft pastels into powder. This powder can then be applied and fixed to the surface, creating the characteristic soft blending effects found in pastel drawings.

Spatter Sieve IK-001

Code	402 504
Unit	1
Barcode	4938331 322446
Material	Steel
Dimmensions	approx.W93 x H166mm
Weight	approx.33 g
Made in China
